HAMILTON CENSUS DATA MAPS

PREPARED BY THE REGIONAL MUNICIPALITY OF HAMILTON-WENTWORTH

Census Data Maps

Prepared by The Regional Municipality of Hamilton-Wentworth
Planning Department
December 1983

SOURCE: CENSUS OF CANADA 1971, 1976 and 1981

IMPORTANT NOTE: On all maps, Census Tract Number is in
parantheses, e.g. (9)

: All data has been made to conform to 1971
Census Tracts, with the exception of Census
Tract No.'s 2 and 3, which were slightly
different in 1976.

52	Average Income Of Persons Not In Families 1971 and 1981

SPECIAL NOTES

Income data

Average income, median income and standard error of average income of population 15 years and over are calculated for persons with income only but for all census families, non-family persons and private households whether or not they reported any income. Medians have been calculated from unpublished data. Aggregate income calculated from these data should be used with caution as averages were calculated prior to rounding.

The total income concept used in the 1981 Census is identical to that used in the 1971 Census. However, the 1971 Census provides total income data on all individuals 15 years and over, while the 1981 Census excluded from the income sample the inmates of institutions. Furthermore, while the 1971 reports included data on both private and collective households, the 1981 Census income statistics for census families, non-family persons and households are published only for those living in private households.

The income size distributions by various characteristics for population 15 years and over, census families, non-family persons, economic families, unattached individuals and private households in Canada and the provinces are published in separate reports.

Census income statistics are subject to sampling variability. Although such sampling variability may be quite small for large population groups, its effects cannot be ignored in the case of very small subgroups of population in an area or in a particular category. This is because, all other things being equal, the larger the sample size, the smaller is the error. For this reason, income data for areas, where the total population was below 250, have been suppressed. However, where statistics are not suppressed but are still based on relatively small totals, the readers are strongly advised to exercise caution in the use and interpretation of these statistics.

Ethnic Origin

The 1981 ethnic origin question attempts to trace the "roots" of the population of Canada. The data derived from this question reflect respondents' perception of their ethnic background, and the cultural group with which they most closely identify.

The comparability of the 1981 ethnic origin data with that from previous censuses is affected by seven main factors:

- (1) Previous censuses usually traced ethnic origin (racial origin) through the paternal ancestry. (1) The 1981 Census is the first that does not restrict the tracing of ethnic origin to one side of the family.
- (2) The 1981 Census is the first to allow more than one ethnic origin response per individual (e.g., a response of French and German is valid and is retained for tabulation purposes). Previous censuses reduced all multiple ethnic origin responses down to a single response. For the 1971 Census, if more than one origin was indicated on the questionnaire, one was arbitrarily selected. Thus, in 1971, if 100 people answered both French and German, perhaps 45 would have been assigned French, and the remaining 55, German. In 1981, all 100 people would retain both ethnic origins.

Comparability of Labour Force Activity Data

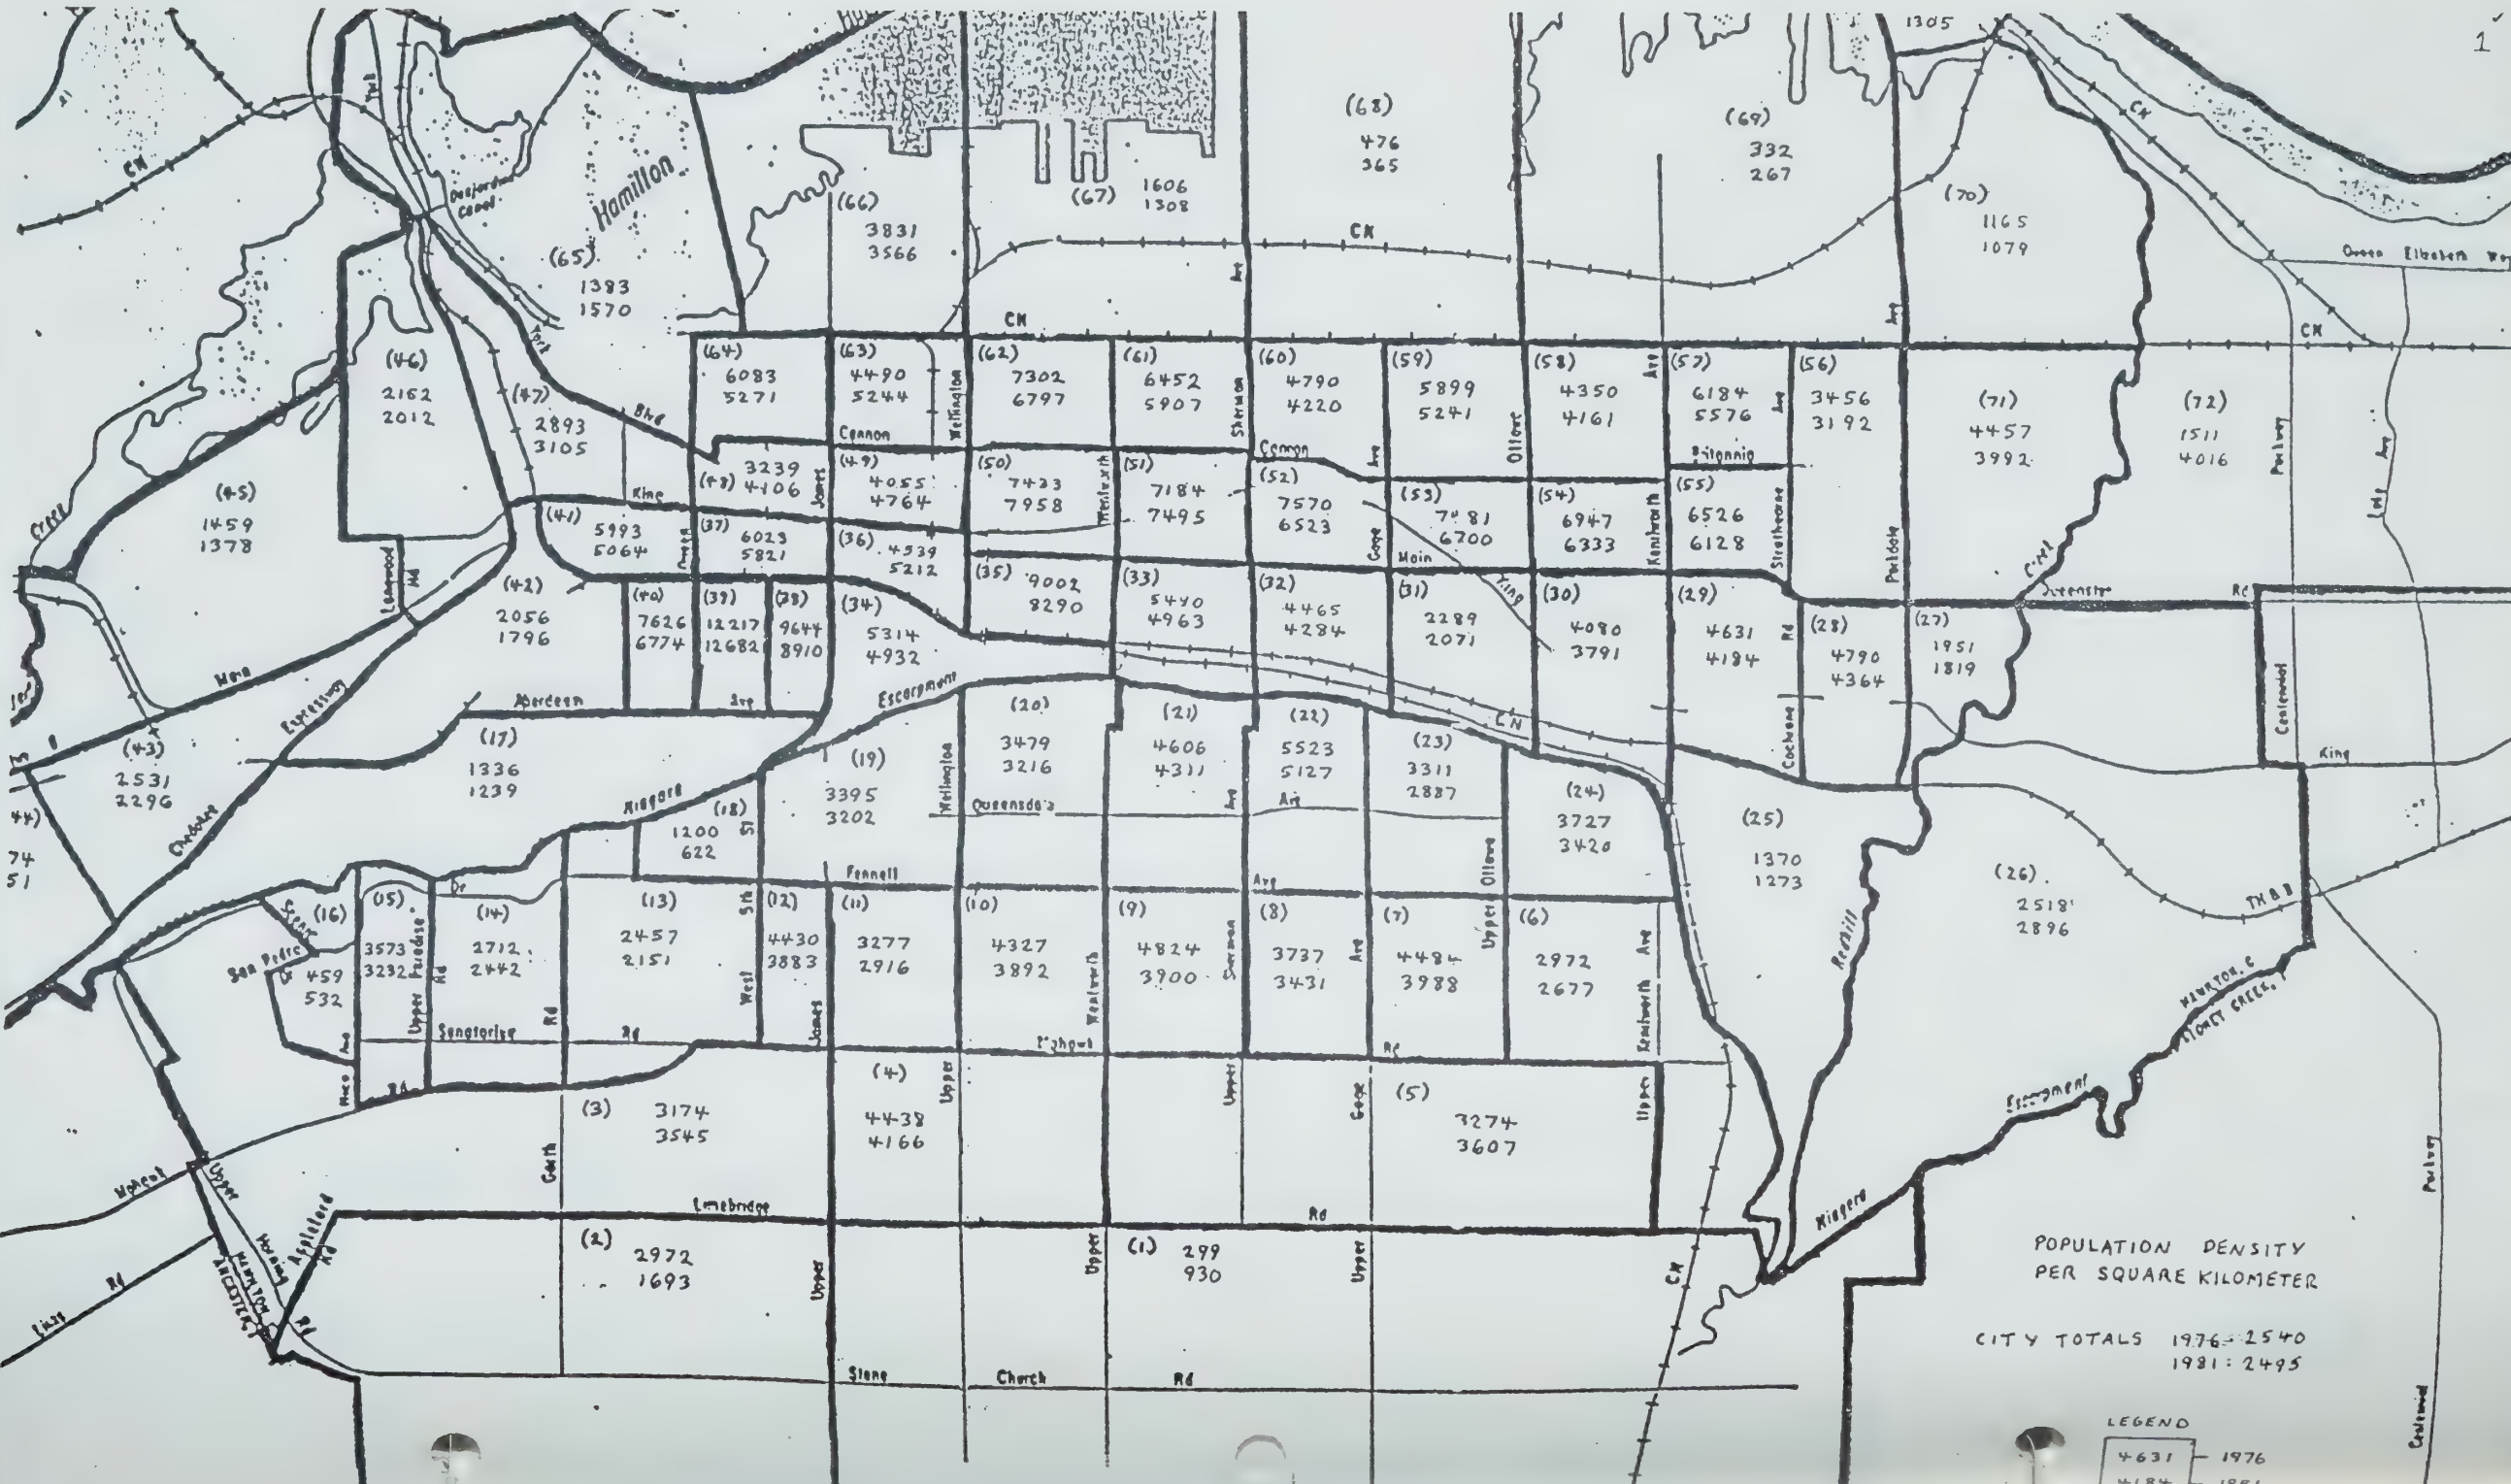

Differences between the 1971 and 1976 Census definitions of "employed", "unemployed" and "not in labour force" must be taken into consideration when making comparisons. In 1976 and 1981, the "employed" category included women living and working less than 20 hours a week without pay on a family farm who were related to the household head, whereas in 1971 most of these women had been classified as "not in labour force". In 1976 two new questions were added, one on "definite arrangements to report to a new job", the other on availability for work. The "definite arrangements" question implied that the new job would begin "at a later date", whereas in 1981 it was to begin "within the next four weeks". In 1981 more detailed response categories were added to the availability

questions. In addition to these changes, in 1981 the reference period for the "lay-off" question was increased from 30 days to 26 weeks. Moreover, the reference period for the "looking for work" question was changed from "last week" in 1971 and 1976 to "during the last four weeks" in 1981. Inmates were excluded from the population 15 years and over in 1981 after inclusion in 1971 and 1976.

Schooling Data

Comparisons of the 1981 Census schooling data with past censuses or with other sources should generally be restricted to uniform characteristic and to similar temporal and population components. (1) General comparisons that are made should take note of the fact that the 1981 schooling data in contrast to that for previous census years exclude inmates of institutions, and are reported only for the population 15 years and over, contrast with 1971 and earlier censuses which reported schooling figures for the population years and over. More specifically, there is one main aspect of the 1981 schooling data which distinguishes it from other sources.

The main aspect of the 1981 Census schooling data where comparability is affected is in the "other non-university education" category. This other non-university education concept differs from previous censuses and from other measures of the so-called post-secondary non-university concept in two respects. First, in contrast to the 1976 Census, this question now relates to a university transfer courses of community college and the CEGEP general of Quebec; therefore, a shift in the data from university to non-university can be expected and does indeed occur between 1976 and 1981 (especially for the CEGEP population). Second, the 1981 question has been broadly conceptualized to encompass all non-university schooling beyond elementary and secondary, regardless of secondary school graduation. The 1981 other non-university education concept covers a broad spectrum of schooling that includes the conventional post-secondary areas as well as other training in the trades and vocational areas.
